Research Summary

Vacuum grippers are robotic end-of-arm tools designed for material handling and manipulation in automated manufacturing and logistics applications. These grippers use vacuum technology to securely pick up, hold, and release objects of various shapes, sizes, and weights. The gripper typically features suction cups or pads that create a vacuum seal when placed on the object's surface, allowing the gripper to hold the item through the force of atmospheric pressure. Vacuum grippers are commonly employed in industries such as packaging, assembly lines, and warehouses, where the ability to handle different objects with flexibility and speed is crucial. Their adaptability makes them suitable for a wide range of applications, and they play a key role in enhancing the efficiency and productivity of robotic automation systems.

The major global manufacturers of Vacuum Grippers include Schmalz, Piab AB, SMC, Onrobot, Robotiq, FIPA, Coval, Gimatic S.r.l, NIHON PISCO, etc. The global players competition landscape in this report is divided into three tiers.
