Research Summary

A vacuum interrupter is a key component in medium and high-voltage circuit breakers and other switchgear devices, designed to interrupt or break the electrical current flow in a circuit. Unlike traditional interrupters that use air or other insulating mediums, a vacuum interrupter relies on a vacuum as the insulating and extinguishing medium. The vacuum offers several advantages, including high dielectric strength, quick arc quenching capabilities, and minimal risk of ionization. When the electrical contacts within the vacuum interrupter open, the vacuum rapidly extinguishes the arc that forms between them, preventing the current from continuing to flow. Vacuum interrupters are widely used in power distribution systems, electrical grids, and industrial applications where reliable and efficient interruption of electrical currents is essential.

The major global manufacturers of Vacuum Interrupter include ABB, Siemens, Eaton, Shaanxi Baoguang, Chengdu Xuguang Electronics, Mitsubishi Electric, Meidensha, LS Electric, TOSHIBA, CG Power & Industrial Solutions, Henan Pinggao Electric, China Zhenhua Electronics Group, Beijing Orient Vacuum Electric, Kunshan GuoLi Electronic
