### Research Summary

A vacuum pump brake, often referred to as a brake booster, is a critical component in the braking system of a vehicle. It enhances the force applied to the brake pedal by creating a vacuum that aids in brake actuation. In many modern vehicles, especially those with gasoline or diesel engines, a vacuum pump is used to generate the necessary vacuum for the brake booster. When the driver applies the brake pedal, the vacuum-assisted brake booster multiplies the force exerted, making it easier to apply the brakes. This system improves brake performance, responsiveness, and overall safety by ensuring efficient and reliable braking even with relatively low pedal force. Vacuum pump brakes are commonly found in a variety of automobiles and contribute to the effectiveness of hydraulic braking systems in providing reliable stopping power.

The major global manufacturers of Vacuum Pump Brake include Aisin Seiki, Hyundai Mobis, Continental, TRW, Mando, Bosch, HUAYU, Nissin Kogyo, Hitachi, Dongguang Aowei, Wanxiang, Zhejiang VIE, Zhejiang Jingke, FTE, APG, BWI Group, etc. The global players competition landscape in this report is divided into three tiers.
