### Research Summary

Vascular Closure Devices (VCDs) are medical devices designed to achieve hemostasis, or the cessation of bleeding, at the site where vascular access was gained for procedures such as catheterization or angiography. These devices are crucial in minimizing complications associated with prolonged manual compression at the puncture site. VCDs work by sealing the puncture site in the artery, reducing the risk of bleeding and hematoma formation. There are various types of Vascular Closure Devices, including collagen plugs, suture-based devices, and external compression devices. These devices offer a quicker and often more comfortable alternative to traditional manual compression, allowing for faster patient recovery and early ambulation after vascular procedures. Vascular Closure Devices play a vital role in enhancing the safety and efficiency of vascular interventions while improving patient outcomes and comfort.

The major global manufacturers of Vascular Closure Devices (VCDS) include Teleflex Incorporated, Abbott Laboratories, Boston Scientific Corporation, BD, Medtronic, Cook,
