Research Summary

A vascular graft is a medical implant used to replace or bypass damaged or diseased blood vessels within the circulatory system. These grafts are commonly employed in vascular surgery to restore proper blood flow when natural blood vessels are obstructed or weakened. Vascular grafts can be made from various materials, including synthetic materials like Dacron or expanded polytetrafluoroethylene (ePTFE), or biological materials such as autologous veins or arteries harvested from the patient or cadaveric sources. The choice of graft material depends on the specific requirements of the vascular procedure and the patient's condition. Vascular grafts play a crucial role in treating conditions such as peripheral artery disease, aneurysms, or blocked arteries, facilitating the restoration of adequate blood circulation and preventing complications related to inadequate blood flow.

The major global manufacturers of Vascular Graft include Getinge Group, Bard, Terumo, W. L. Gore, JUNKEN MEDICAL, B.Braun, LeMaitre, Shanghai Suokang, Shanghai Chest Medical, etc. The global players competition landscape in this report is
