Research Summary

Vegetable parchment, also known as parchment paper, is a type of paper that has been coated or treated to make it resistant to moisture and grease. It is often used in cooking and baking as a non-stick and easily removable lining for pans and trays. The paper is typically made by passing the paper through a sulfuric acid solution, which imparts it with properties such as resistance to high temperatures and grease absorption. Vegetable parchment is widely appreciated in the culinary world for its ability to prevent food from sticking to surfaces during the cooking process and for easy clean-up afterward.
