### Research Summary

Vehicle aluminum extrusions refer to components and parts for vehicles that are produced through the extrusion process using aluminum. Extrusion involves forcing the aluminum alloy through a shaped die to create a specific cross-sectional profile. In the context of vehicles, aluminum extrusions are utilized for a variety of purposes, such as in the construction of frames, body panels, chassis components, and other structural elements. Aluminum is preferred in the automotive industry due to its lightweight nature, corrosion resistance, and strength, contributing to improved fuel efficiency and overall performance. These extrusions play a crucial role in enhancing the structural integrity and design flexibility of vehicles while also supporting efforts to reduce their environmental impact through weight reduction.

The major global manufacturers of Vehicle Aluminum Extrusions include Hydro, APALT, Constellium, UACJ, Kaiser, Impol, Hindalco, Hoshion, STEP-G, Arconic, Haomei, KAP, Otto Fuchs, etc. The global players competition landscape in this report is divided into three tiers.
