### Research Summary

Vein viewers, also known as vein finders or vein illumination devices, are medical tools designed to assist healthcare professionals in locating veins beneath the skin's surface. These devices use near-infrared light to illuminate and visualize the vasculature, making veins more visible and aiding in procedures such as venipuncture, intravenous (IV) catheter placement, and blood draws. By enhancing the visibility of veins, vein viewers help healthcare practitioners improve the accuracy and efficiency of these procedures, particularly in patients with difficult-to-locate veins, such as infants, elderly individuals, or those with challenging medical conditions. The technology is non-invasive and provides real-time imaging, contributing to a reduction in the number of attempts needed for successful vascular access, minimizing patient discomfort, and enhancing overall medical care.

The major global manufacturers of Vein Viewers include AccuVein, Christie, VEINCAS, Surmount, Vuetek, TransLite, ZD Medical, Qingdao Bright, BLZ Technology, Near Infrared Imaging, IISM INC, STIHLER ELECTRONIC, InSono, etc. The global players
