Research Summary

Vertebroplasty and kyphoplasty are medical procedures used to treat vertebral compression fractures (VCFs) in the spine, often caused by osteoporosis or spinal tumors. Vertebroplasty involves injecting bone cement directly into the fractured vertebra to stabilize and strengthen it, relieving pain and improving mobility. Kyphoplasty, a similar but more advanced procedure, incorporates the use of a balloon-like device to create a cavity within the fractured vertebra before injecting the bone cement. This additional step aims to restore vertebral height and reduce deformities associated with the compression fracture. Both vertebroplasty and kyphoplasty are minimally invasive techniques that offer rapid pain relief, increased mobility, and enhanced spinal stability for individuals suffering from vertebral compression fractures.

The major global manufacturers of Vertebroplasty and Kyphoplasty Devices include Medtronic, Stryker, J&J (Depuy Synthes), Globus Medical, Merit Medical, Kinetic Medical, Benvenue, Spine Wave, Teknimed, etc. The global players competition
