### Research Summary

A Vertical Disc Stack Separator is a type of centrifuge used for the separation of liquids and solids from a liquid-liquid or liquid-solid mixture. The separator operates on the principle of centrifugal force, which causes the heavier particles or phases to move outward and settle on the walls of a rotating disc stack, while the lighter phase remains in the center. The disc stack consists of a series of closely spaced, vertically oriented discs. As the mixture enters the separator, the high rotational speed induces a strong centrifugal force, leading to the efficient separation of different components based on their densities. This equipment finds applications in various industries, including food and beverage, pharmaceuticals, and chemical processing, for tasks such as clarifying liquids, separating impurities, and purifying substances through continuous and automated separation processes.

The major global manufacturers of Vertical Disc Stack Separator include Alfa Laval, GEA, ANDRITZ GROUP, SPX Plow, Mitsubishi Kakoki Kaisha, Flottweg, Peralisi, IHI, Polat Group, Hutchison Hayes, HAUS, Reda, Tomoe Engineering, Huading Separator,
