Research Summary

Vessel Monitoring System (VMS) Software refers to specialized software applications designed to track and monitor the movements, activities, and compliance of maritime vessels. VMS software typically integrates data from various sources, including satellite tracking systems, onboard sensors, and communication networks, to provide real-time information about vessel positions, speeds, courses, and other relevant parameters. The software allows maritime authorities, fisheries management organizations, and vessel operators to monitor vessel activities, enforce regulations, and ensure compliance with fishing quotas, maritime laws, and environmental regulations. VMS software may include features such as vessel tracking, geofencing, electronic reporting, data analysis, and reporting tools to facilitate efficient management of marine resources, enhance maritime security, and support sustainable fisheries management practices. Additionally, VMS software may integrate with other maritime systems such as Automatic Identification System (AIS), radar, and maritime domain awareness platforms to provide a comprehensive picture of maritime activities and enhance situational

awareness for maritime stakeholders.

The major global suppliers of Vessel Monitoring System Software include Orbcomm Inc., Applied Satellite Technology Ltd, Beijing Highlander Digital Technology Co., Ltd., BlueTraker, CLS Fisheries, Orolia Maritime, Trackwell, ShipNet, Wartsila Corporation, THINKmarine Co., Ltd., Visma, Satlink S.L., SRT Marine Systems Plc, etc. The global players competition landscape in this report is divided into three tiers.
