Research Summary

Vessel Traffic Services (VTS) are maritime traffic management systems designed to enhance the safety and efficiency of vessel navigation in busy waterways, ports, and coastal areas. VTS systems provide real-time monitoring, tracking, and management of vessel movements through the integration of various technologies such as radar, Automatic Identification System (AIS), closed-circuit television (CCTV), and radio communication systems. VTS operators use these systems to monitor vessel traffic, detect potential collisions or navigational hazards, and provide navigational assistance and traffic management services to vessel operators. VTS services may include vessel traffic monitoring, traffic organization and coordination, navigational assistance, provision of maritime safety information, and incident response coordination. By providing timely information and guidance to vessel operators, VTS systems help to prevent maritime accidents, reduce congestion, optimize traffic flow, and enhance overall safety and efficiency in maritime transportation.
