Research Summary

Veterinary feed additives are substances added to animal feed to improve the nutritional quality, health, and performance of livestock, poultry, and other animals. These additives may include vitamins, minerals, amino acids, enzymes, probiotics, prebiotics, antioxidants, growth promoters, and other bioactive compounds. Veterinary feed additives are used to enhance animal growth, increase feed efficiency, support immune function, optimize nutrient utilization, and prevent or manage diseases and health conditions. They may also be added to feed to compensate for nutrient deficiencies in animal diets or to address specific dietary requirements at different stages of animal growth and development. Veterinary feed additives play a vital role in modern animal production systems by promoting animal health and welfare, improving feed efficiency, and enhancing the quality and safety of animal-derived food products. Regulatory agencies such as the U.S. Food and Drug Administration (FDA) and the European Food Safety Authority (EFSA) regulate the approval, use, and labeling of veterinary feed additives to ensure their safety, efficacy, and compliance with animal health and food safety standards.

The major global manufacturers of Veterinary Feed Additives include Evonik, DuPont, DSM, Adisseo, BASF, ADM, Nutreco, Charoen Pokphand Group, Cargill, Sumitomo, Chemical, Kemin Industries, Biomin, Alltech, Addcon, Bio Agri Mix, etc. The global players competition landscape in this report is divided into three tiers.
