Research Summary

Veterinary zinc bacitracin is a type of antibiotic medication used in veterinary medicine to prevent and treat bacterial infections in animals. Bacitracin is a polypeptide antibiotic that works by interfering with the synthesis of bacterial cell walls, leading to bacterial cell death. Zinc bacitracin is a formulation of bacitracin that includes zinc, which helps to stabilize the antibiotic compound and enhance its antimicrobial activity. Veterinary zinc bacitracin is commonly used to prevent and control infections in livestock, poultry, and other animals, including those caused by Gram-positive bacteria such as *Staphylococcus*, *Streptococcus*, *Clostridium*, and *Corynebacterium* species. It is typically administered orally or topically, depending on the type of infection and the species being treated. Veterinary zinc bacitracin is available in various formulations, including powders, ointments, creams, and feed additives, and is commonly used in veterinary practice for the prevention of diseases such as necrotic enteritis, respiratory infections, and skin infections in animals. It is important to use veterinary zinc bacitracin under the guidance of a veterinarian, as improper use or overuse of antibiotics can lead to the development of antibiotic resistance and other adverse effects.
