Research Summary

Vinyl-terminated polydimethylsiloxane (PDMS) is a type of silicone polymer characterized by the presence of vinyl functional groups (-CH=CH₂) at the polymer chain ends. PDMS is a widely used silicone elastomer known for its flexibility, thermal stability, and low surface tension. The presence of vinyl groups in vinyl-terminated PDMS allows for further chemical modification through hydrosilylation reactions, where the vinyl groups can react with compounds containing Si-H bonds to form crosslinked networks. This property makes vinyl-terminated PDMS a valuable precursor for the synthesis of silicone elastomers, coatings, adhesives, and other materials with tailored properties. These materials find applications in various industries, including automotive, electronics, medical devices, and personal care products, where properties such as flexibility, biocompatibility, and resistance to extreme temperatures and chemicals are required. Overall, vinyl-terminated PDMS offers versatility and customization options for the development of advanced silicone-based materials with diverse applications.

The major global manufacturers of Vinyl Terminated Polydimethylsiloxane include GELEST, PCC, Milliken Chemical, Siltech ., AB Specialty Silicones, Finetech Industry, United Chemical, Shandong Dayi Chemical, YZHY XC, Runhe, BlueStar, Wynca, DyStar, BRB International, etc. The global players competition landscape in this report is divided into three tiers.
