Research Summary

Vinyl versatate, also known as tert-butyl vinyl ether, is a chemical compound that belongs to the class of vinyl ethers. It is derived from the reaction between vinyl acetate and tert-butanol. Vinyl versatate is primarily utilized as a monomer in the production of copolymers, especially in the synthesis of vinyl acetate-versatic acid copolymers. These copolymers find applications in various industries, including coatings, adhesives, textiles, and paper coatings. Vinyl versatate imparts flexibility, adhesion, and water resistance to the copolymers, making them suitable for a wide range of applications. Additionally, vinyl versatate can also be used as a reactive diluent in radiation-curable coatings and inks, where it improves viscosity and film formation properties. Overall, vinyl versatate serves as a versatile monomer in the synthesis of copolymers with tailored properties for different industrial applications.

The major global manufacturers of Vinyl Versatate include Hexion, TJSHIELD, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold
