Research Summary

Vinylamine is a chemical compound belonging to the class of amines, characterized by the presence of a vinyl group (-CH=CH₂) attached to an amino group (-NH₂). It is commonly produced through the reaction between acetylene and ammonia or by the reduction of acrylonitrile. Vinylamine can exist in different forms, including the primary vinylamine (1-aminoethylene) and secondary vinylamines. These compounds are highly reactive and can participate in various chemical reactions, including polymerization and condensation reactions. Vinylamines are used in the synthesis of polymers, particularly in the production of vinylamine-based resins and copolymers. These materials have applications in adhesives, coatings, textiles, and specialty chemicals. Additionally, vinylamines are utilized as intermediates in the synthesis of pharmaceuticals, agrochemicals, and other organic compounds. Overall, vinylamine is a versatile compound with important industrial applications due to its unique chemical properties and reactivity.

The major global manufacturers of Vinylamine include Dow, Nouryon (AkzoNobel), Huntsman, BASF, Tosoh, Delamine, Shandong Lianmeng Chemical, Arabian Amines
