Research Summary

Vinylphosphonic acid is a chemical compound with the molecular formula $C_2H_3PO_3H_2$, consisting of a vinyl group ($-CH=CH_2$) attached to a phosphonic acid functional group ($-PO_3H_2$). It is a colorless liquid at room temperature and is highly soluble in water. Vinylphosphonic acid is used primarily as a monomer in the synthesis of polymers and copolymers for various industrial applications. It can undergo polymerization to form homopolymers or copolymerization with other monomers to produce copolymers with tailored properties. These polymers find applications in diverse fields such as adhesives, coatings, ion exchange resins, and specialty materials. Additionally, vinylphosphonic acid is employed as a chemical intermediate in the production of pharmaceuticals, agrochemicals, and other organic compounds. Its versatile nature and reactivity make it a valuable component in numerous industrial processes.

The major global manufacturers of Vinylphosphonic Acid include Euticals, BASF, Solvay Novecare, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a
