### Research Summary

Virtual Rehabilitation and Telerehabilitation Systems are innovative approaches to delivering rehabilitation services remotely using technology. Virtual Rehabilitation typically involves the use of virtual reality (VR), augmented reality (AR), or other immersive technologies to provide therapeutic interventions and exercises to individuals recovering from injuries, disabilities, or medical conditions. These systems simulate real-world environments or activities, allowing patients to engage in interactive exercises and activities that promote physical, cognitive, or emotional recovery. Telerehabilitation, on the other hand, leverages telecommunications technology such as video conferencing, remote monitoring, and digital platforms to enable therapists to remotely assess, monitor, and guide patients through rehabilitation programs. Both Virtual Rehabilitation and Telerehabilitation Systems offer several benefits, including increased accessibility to care, flexibility in scheduling, reduced travel requirements, and the ability to deliver personalized, evidence-based interventions tailored to each patient's needs. These

systems have the potential to improve outcomes, enhance patient engagement and compliance, and lower healthcare costs by providing effective rehabilitation services in the comfort of patients' homes or other remote locations.

The major global suppliers of Virtual Rehabilitation and Telerehabilitation Systems include GestureTek Health, Brontes Processing, Motek Medical (DIH Medical Group), Virtualware Group, Motorika, Bridgeway Senior Healthcare, LiteGait, Mindmaze, Doctor Kinetic, Geminus-Qhom, Rehametrics, Hinge Health, SWORD Health, CoRehab Srl, 270 Vision (BPMpathway), MIRA Rehab Limited, etc. The global players competition landscape in this report is divided into three tiers.
