Research Summary

Vitamin B2, also known as riboflavin, is a water-soluble vitamin that plays a vital role in various physiological processes in the body, including energy metabolism, cell growth, and the metabolism of fats, carbohydrates, and proteins. It is an essential nutrient that must be obtained through the diet since the body cannot produce it on its own. Vitamin B2 is found in a variety of foods, including dairy products, eggs, lean meats, green leafy vegetables, nuts, and enriched cereals and grains. Riboflavin is involved in the production of flavin adenine dinucleotide (FAD) and flavin mononucleotide (FMN), which are coenzymes necessary for numerous metabolic reactions, particularly those involved in the production of ATP (the body's primary energy source). Adequate intake of vitamin B2 is important for maintaining overall health, supporting growth and development, promoting healthy skin and eyes, and aiding in the repair and maintenance of tissues. Deficiency of vitamin B2 can lead to symptoms such as sore throat, redness and swelling of the lining of the mouth and throat (cheilosis), cracks or sores at the corners of the mouth (angular stomatitis), skin rashes, and inflammation of the tongue (glossitis). Ensuring an adequate intake of foods rich in vitamin B2 or taking supplements as needed is crucial for preventing deficiency and maintaining optimal

health.
