Research Summary

Vitamin E is a fat-soluble antioxidant vitamin that plays a crucial role in maintaining the health of cells and tissues throughout the body. It exists in eight different forms, with alpha-tocopherol being the most biologically active form in humans. Vitamin E protects cells from damage caused by free radicals and oxidative stress, thereby helping to prevent cell damage and inflammation. It also supports immune function, skin health, and blood vessel function. Good dietary sources of vitamin E include nuts, seeds, vegetable oils, leafy green vegetables, and fortified cereals. While deficiency of vitamin E is rare, it can lead to symptoms such as muscle weakness, vision problems, and impaired immune function. Ensuring an adequate intake of vitamin E through diet or supplementation is important for maintaining overall health and reducing the risk of chronic diseases associated with oxidative damage.

The major global manufacturers of Vitamin E include ADM, Zhejiang Medicine, DSM (Cargill), Wilmar Nutrition, BASF, Riken, Mitsubishi Chemical, Shandong SunnyGrain, Ningbo Dahongying, Glanny, Zhejiang Worldbestve, Vitae Naturals, etc. The global players competition landscape in this report is divided into three tiers.
