Research Summary

Vitamin K3, also known as menadione or menadione sodium bisulfite, is a synthetic form of vitamin K. It is water-soluble and is converted in the body into active forms of vitamin K, primarily menaquinone-4 (MK-4). Vitamin K3 is not commonly used as a dietary supplement due to its potential toxicity at high doses. Instead, it is primarily used in animal feed as a source of vitamin K for livestock and poultry. In addition, vitamin K3 has been used in some topical skin care products for its potential antioxidant and skin-brightening properties. However, its use in cosmetics has declined due to safety concerns. High doses of vitamin K3 can cause toxicity, including liver damage and hemolytic anemia, and it is therefore not recommended for human consumption without medical supervision. As a result, other forms of vitamin K, such as vitamin K1 and vitamin K2, are typically preferred for dietary supplementation.

The major global manufacturers of Vitamin K3 include Dirox, Oxyvit, Brother Enterprises, Vanetta, Peace Chemical, Zhenhua Chemical, Chongqing Minfeng, etc. The global players competition landscape in this report is divided into three tiers.
