Research Summary

VOC's rotor refers to a component within certain types of VOC (Volatile Organic Compounds) abatement or recovery systems, particularly those employing adsorption technologies. In these systems, VOC-laden air is passed through a rotor containing adsorbent materials, such as activated carbon or zeolites. The rotor may rotate or oscillate to increase the contact between the air stream and the adsorbent material, maximizing VOC capture efficiency. This setup allows for the concentration of VOCs from the air before they undergo treatment or disposal. The VOC's rotor plays a crucial role in enhancing the performance and efficiency of VOC abatement or recovery systems by facilitating the adsorption process and increasing the surface area available for VOC capture.

The major global manufacturers of VOC's Rotor include Seibu Giken, Nichias, Munters, HSJ Environment Protection, Churui, ProFlute, etc. The global players competition landscape in this report is divided into three tiers.
