Research Summary

Voice Coil Motor (VCM) actuators are electromechanical devices that utilize the principle of electromagnetic induction to convert electrical energy into mechanical motion. They consist of a coil of wire (the voice coil) suspended within a magnetic field. When an electrical current is applied to the coil, it generates a magnetic field that interacts with the fixed magnetic field, causing the coil to move linearly or rotationally. This movement is used to actuate various mechanisms, such as adjusting the position of a lens in autofocus systems, moving the read/write head in hard disk drives, or controlling the position of mirrors in optical systems. VCM actuators are valued for their precision, speed, and ability to provide smooth motion control. They are commonly used in applications where precise positioning and rapid response times are critical, such as in optical and imaging systems, robotics, and industrial automation.

The major global manufacturers of Voice Coil Motor Actuators include Sensata, SMAC, Hitachi Metals, PI (Physik Instrumente), Akribis, Thorlabs, Inc., Tongmao Electronics, Celera Motion, Airex, H2W Technologies, PBA Systems, MotiCont, Motran Industries
