### Research Summary

Volatile Corrosion Inhibitors (VCI) packaging materials are specialized packaging products designed to protect metal components and products from corrosion during storage, transportation, and shipment. These packaging materials typically contain VCI compounds that release volatile corrosion inhibitors into the surrounding airspace, forming a protective layer on metal surfaces. The VCI molecules adsorb onto the metal surface, creating a barrier that inhibits the corrosion process by neutralizing moisture and other corrosive elements. VCI packaging materials come in various forms, including VCI paper, VCI films, VCI bags, VCI foam, and VCI emitters, among others. They are widely used in industries such as automotive, aerospace, electronics, machinery, and metalworking to safeguard metal parts, components, tools, and equipment from corrosion damage. VCI packaging materials offer a cost-effective and efficient solution for preventing corrosion-related issues, such as rust and oxidation, thereby preserving the integrity and functionality of metal products throughout their lifecycle.

The major global manufacturers of Volatile Corrosion Inhibitors (VCI) Packaging Material include CORTEC, Aicello, Branopac, Armor Protective Packaging, Oji F-Tex, Daubert VCI, Zerust, Rustx, Transilwrap (Metpro), Protective Packaging Corporation, Technology Packaging, Protopak Engineering Corp, Green Packaging, CVCI, Shanghai Santai, KEYSUN, Nantong Yongyu Anti-Rust, etc. The global players competition landscape in this report is divided into three tiers.
