### Research Summary

Voluntary carbon credit trading is a market-based approach where companies, organizations, or individuals can purchase carbon credits to offset their greenhouse gas emissions voluntarily. Unlike mandatory carbon markets regulated by governments, the voluntary market allows participants to buy and sell carbon credits on a discretionary basis, often motivated by corporate social responsibility, environmental stewardship, or consumer demand for sustainable practices. Each carbon credit typically represents one metric ton of carbon dioxide (CO<sub>2</sub>) or its equivalent in other greenhouse gases that has been reduced, removed, or avoided through various projects such as reforestation, renewable energy installations, and energy efficiency improvements. By investing in these credits, participants can compensate for their own emissions and contribute to global efforts to mitigate climate change. Voluntary carbon credit trading provides a flexible mechanism for enhancing sustainability, fostering innovation in emission reduction technologies, and promoting a transition to a low-carbon economy.
