Research Summary

Voluntary carbon offsets are credits generated by projects that reduce or remove greenhouse gas emissions from the atmosphere, which individuals, businesses, or organizations can purchase to compensate for their own carbon footprint. These offsets are voluntary, meaning they are not required by law or regulation but are chosen as a proactive measure to mitigate the environmental impact of activities that produce carbon emissions. Projects that generate carbon offsets typically involve activities such as reforestation, renewable energy production, energy efficiency improvements, methane capture from landfills or livestock operations, and other initiatives aimed at reducing greenhouse gas emissions. By purchasing voluntary carbon offsets, individuals and entities can balance out their carbon emissions by investing in projects that contribute to global emissions reductions, thus supporting climate change mitigation efforts.
