Research Summary

A wafer post-etch residue remover is a chemical solution specifically designed for semiconductor manufacturing processes, aimed at eliminating residues left behind on semiconductor wafers after the etching process. Etching involves selectively removing materials from the wafer surface to create desired patterns or features for semiconductor devices. However, this process can leave behind residues such as etch by-products or contaminants, which can adversely affect device performance and reliability if not properly removed. Wafer post-etch residue removers are formulated with surfactants, solvents, and other additives to effectively dissolve and lift these residues from the wafer surface, ensuring cleanliness and readiness for subsequent processing steps. Their use is critical in semiconductor fabrication to maintain the quality and reliability of semiconductor devices by eliminating contaminants and residues that could compromise performance.

The major global manufacturers of Wafer Post Etch Residue Remover include Entegris, DuPont, Versum Materials, Inc. (Merck), Mitsubishi Gas Chemical, Fujifilm, Avantor,
