Research Summary

Walk-through metal detectors are security screening devices commonly used in various settings such as airports, schools, stadiums, and government buildings to detect the presence of metal objects on a person's body. These detectors consist of a rectangular frame with multiple vertical panels containing metal detection sensors. When a person walks through the frame, the metal detectors emit electromagnetic fields, and if a metal object passes through this field, it disrupts the electromagnetic field, triggering an alarm. Walk-through metal detectors are equipped with sensitivity settings that can be adjusted to detect different sizes and types of metal objects, from small jewelry to larger weapons. They are an essential tool for enhancing security and ensuring public safety by detecting concealed weapons or other prohibited items that individuals may attempt to bring into secure areas.

The major global manufacturers of Walk Through Metal Detectors include CEIA, Garrett, Deluxe, Smiths Detection, Westminster International, Neopost, L3 Security Detection Systems, Nuctech, OSI Systems, Autoclear, Astrophysics, Adani Systems,
