### Research Summary

Wall putty is a thick paste-like substance used in construction and home improvement projects to smooth out and fill imperfections on walls and ceilings before painting or wallpapering. It is typically made of gypsum, cement, or clay mixed with additives such as polymers, fillers, and binders to improve adhesion, workability, and durability. Wall putty is applied to the surface of drywall, plaster, or masonry walls to fill in small cracks, holes, and surface irregularities, creating a smooth and uniform substrate for painting or finishing. Once applied, wall putty dries quickly and can be sanded down to achieve a smooth and level surface.
