Research Summary

Warp knitting machinery is equipment used in the textile industry to produce warp knitted fabrics. Warp knitting is a method of fabric formation where yarns (or ?warp?) are arranged in parallel and fed into the knitting machine. The warp knitting machine then interlaces the yarns in a zigzag or warp-wise direction to create the fabric. These machines typically have multiple parallel yarn feeders and a series of needles or latch hooks that manipulate the yarns to form the desired fabric structure. Warp knitting machinery can produce a wide range of fabrics with different textures, patterns, and properties, making it suitable for various applications such as apparel, lingerie, technical textiles, and home furnishings. These machines vary in complexity and configuration depending on the specific type of warp knitted fabric being produced, ranging from simple tricot machines to more advanced raschel machines capable of producing intricate lace and net-like fabrics.

The major global manufacturers of Warp Knitting Machinery include Karl Mayer, COMEZ(Jakob M?ller), Santoni, Taiwan Giu Chun, Duksoo Machinery, Jingwei Textile
