Research Summary

A washer, in a general sense, refers to a flat, thin, circular or square-shaped object typically made of metal, plastic, or rubber. Washers are commonly used to distribute the load of a threaded fastener such as a bolt or a nut, thereby reducing the risk of damage to the material being fastened, as well as providing a more secure and uniform fastening. They are placed between the fastener and the surface being fastened, serving as a buffer or spacer. Washers come in various types, including flat washers, which are the most common and provide a smooth surface for distributing the load, and lock washers, which have serrations or teeth to prevent loosening of the fastener due to vibration or rotation. Additionally, there are specialized washers such as spring washers, which provide a constant tension and compensate for loosening caused by thermal expansion and contraction. Washers are widely used in construction, automotive, machinery, plumbing, and many other industries where secure and reliable fastening is essential.

The major global manufacturers of Washer include W?rth, Bossard, Shanghai PMC, Nord-Lock, Fontana Gruppo, Schnorr, Growermetal, STANLEY, Ciser, MW Industries,
