Research Summary

Water-based epoxy emulsion is a type of eco-friendly coating and adhesive material that combines epoxy resins with water as the primary solvent, eliminating the need for volatile organic compounds (VOCs) commonly found in traditional solvent-based epoxies. The emulsion consists of finely dispersed epoxy particles in water, which, when applied to surfaces, form a durable, chemically resistant, and smooth finish upon curing. These emulsions are used in a wide range of applications, including protective coatings for metal, concrete, and wood, as well as in adhesives and sealants. Water-based epoxy emulsions offer advantages such as lower environmental impact, easier handling, and improved safety compared to solvent-based formulations, making them a preferred choice in industries looking for sustainable alternatives without compromising on performance. They also provide excellent adhesion, corrosion resistance, and durability, particularly in demanding conditions like industrial, automotive, and architectural applications.

The major global manufacturers of Water-Based Epoxy Emulsion include Huntsman,

BASF, Solvay, Wanhua Chemical Group, Guangzhou Huanyang Cailiao Technology, BoGao Group, BATF, Excinno, Zhejiang Anbang New Material Development, Jiangsu Fuqisen New Materials, Shanghai Greenguard Waterborne Coating, Aqua Union, Yixing Huaxia Chemical Materials, Tepulex, etc. The global players competition landscape in this report is divided into three tiers.
