Research Summary

A water-based fire suppression system is a type of fire protection system that utilizes water as the primary extinguishing agent to control and extinguish fires. These systems are commonly installed in buildings, industrial facilities, and other high-risk areas to provide rapid and effective fire suppression. Water-based fire suppression systems can include various components such as sprinkler systems, water mist systems, deluge systems, and foam systems, each tailored to specific fire hazards and applications. Sprinkler systems are the most common type and consist of a network of pipes fitted with sprinkler heads that activate automatically when exposed to heat, releasing water to extinguish or control the fire. Water mist systems use fine water droplets to cool and suppress fires, while deluge systems release large volumes of water over a wide area to quickly extinguish fires. Foam systems combine water with foam concentrate to create a foam blanket that suppresses flammable liquid fires. Water-based fire suppression systems are effective, reliable, and widely used due to their simplicity, affordability, and ability to rapidly control a wide range of fire types.

The major global suppliers of Water-based Fire Suppression System include Tyco International (Johnson Controls), Honeywell, United Technologies Corporation, Siemens, Robert Bosch, Viking Group, Halma, Nohmi Bosai, Protec Fire Detection, Fujian Tianguang Fire Fighting, Shanghai Jindun, CFE, Nanjing Fire Fighting, Guangdong Pingan Fire Industry, etc. The global players competition landscape in this report is divided into three tiers.
