Research Summary

Water hammer arrestors are plumbing devices designed to alleviate or prevent the occurrence of water hammer, a phenomenon characterized by sudden pressure surges and banging noises in water pipes. These devices typically consist of a sealed chamber containing air or gas, installed within the plumbing system near water-using fixtures or appliances. When a sudden change in water flow occurs, such as when a valve is closed quickly, the water hammer arrestor absorbs the excess pressure by compressing the air or gas within the chamber, preventing the pressure surge from causing damage to the pipes or fixtures. Water hammer arrestors are commonly used in residential, commercial, and industrial plumbing systems to protect against the damaging effects of water hammer, including pipe bursts, leaks, and premature wear on plumbing components. They help maintain water system integrity, reduce noise levels, and prolong the lifespan of plumbing infrastructure by mitigating the harmful effects of pressure fluctuations.

The major global manufacturers of Water Hammer Arrestors include Watts, Sioux Chief,
