### Research Summary

A water heater is a household appliance or system used to heat water for various domestic purposes, such as bathing, cooking, cleaning, and space heating. Water heaters are typically powered by electricity, natural gas, propane, or solar energy, and they come in different types, including tankless (on-demand) water heaters and tank-type water heaters. Tankless water heaters heat water directly without the need for a storage tank, providing hot water on demand and offering energy savings by eliminating standby heat loss. Tank-type water heaters store a volume of hot water in an insulated tank and maintain it at a set temperature until needed, releasing hot water when a tap or fixture is turned on. Water heaters are essential for providing a reliable and consistent supply of hot water for household use, and they play a crucial role in maintaining comfort and hygiene in residential and commercial settings. Regular maintenance and proper installation are essential to ensure the efficiency, safety, and longevity of water heater systems.

The major global manufacturers of Water Heater include A. O. Smith Corporation, Ariston Thermo Group, State Industries, Bosch Thermotechnology, Bradford White,
