Research Summary

A water ionizer is a device that alters the pH level of water through a process called electrolysis. These units typically connect to a water source, such as a faucet, and use electrodes to electrically charge the water, separating it into acidic and alkaline components. The alkaline water produced by a water ionizer is said to have a higher pH level, making it more alkaline, while the acidic water has a lower pH level. Proponents claim that drinking alkaline water may have health benefits, such as neutralizing acidic substances in the body and providing antioxidant properties. However, scientific evidence supporting these claims is limited. Water ionizers are commonly used in homes and some commercial settings as a means of obtaining alkaline water for drinking and cooking purposes.

The major global manufacturers of Water-Ionizer include Enagic, AlkaViva(IonWays), Life Ionizers, VWA Water, Alkalux, Chanson Water, KYK, Fujiiryoki, Nihon Trim, Panasonic, OSG Corporation, Vollara, Evontis, Alka Fresh, Air Water Life, PurePro, etc. The global players competition landscape in this report is divided into three tiers.
