Research Summary

A water sampler is a device utilized to collect water samples from natural water sources such as rivers, lakes, oceans, and groundwater for analysis and testing purposes. These samplers vary in design and complexity, ranging from simple hand-held grab samplers to more sophisticated automated systems. Hand-held grab samplers typically consist of a container attached to a pole, enabling users to manually collect discrete water samples at specific depths or locations. On the other hand, automated water samplers are equipped with programmable controllers and sensors for automated sampling based on predefined criteria such as time intervals or water quality parameters. Water samplers are critical tools in environmental monitoring, scientific research, and regulatory compliance efforts, providing valuable data for understanding water quality, assessing pollution levels, and managing water resources effectively.

The major global manufacturers of Water Sampler include Teledyne Isco, HYDRO-BIOS, Grasp, HACH, Sea-Bird Scientific (Danaher), Global Water (Xylem), Aqualabo Group, McLane Research Laboratories, B?rkle, KC Denmark, etc. The global players
