Research Summary

Water-soluble film for laundry capsules is a specialized type of film used in the packaging of laundry detergent pods or capsules. This film is designed to dissolve completely in water, releasing the contents of the capsule and dispersing the detergent into the laundry during the washing cycle. The film is typically made from water-soluble polymers such as polyvinyl alcohol (PVA) or other biodegradable materials. Its primary function is to contain and protect the concentrated detergent ingredients within the capsule until it comes into contact with water. Once in contact with water, the film rapidly dissolves without leaving any residue, ensuring the detergent disperses evenly throughout the laundry load. Water-soluble film for laundry capsules enhances convenience, reduces detergent waste, and minimizes the risk of handling concentrated chemicals compared to traditional liquid or powder detergents. Additionally, the biodegradable nature of the film aligns with environmental sustainability goals in the laundry care industry.
