### Research Summary

Water-soluble film is a thin, flexible material made from water-soluble polymers such as polyvinyl alcohol (PVA) or polyvinylpyrrolidone (PVP), designed to dissolve or disintegrate rapidly upon contact with water or other aqueous solutions. This unique characteristic makes water-soluble film suitable for various applications across industries, including packaging, agriculture, laundry products, pharmaceuticals, and industrial processes. In packaging, water-soluble films are used to encapsulate single-dose products such as detergents, cleaning agents, and personal care products, offering convenience and reducing waste. In agriculture, they are utilized for seed coatings, fertilizers, and crop protection products, allowing for precise delivery and controlled release of active ingredients. Water-soluble films also find applications in pharmaceuticals for oral dissolvable films and transdermal patches, as well as in industrial processes for temporary coatings and packaging materials, providing a versatile and environmentally friendly solution for diverse needs.

The major global manufacturers of Water Soluble Film include Kuraray, Aicello, Nippon
