Research Summary

Water-soluble solder pastes are formulations used in electronics manufacturing for soldering electronic components onto circuit boards. Unlike traditional solder pastes, which are typically composed of metal alloy particles suspended in flux, water-soluble solder pastes contain flux that can be easily dissolved in water after soldering. This feature allows for convenient and efficient removal of flux residues from circuit boards, especially in applications where cleanliness is critical, such as in medical devices or aerospace electronics. Water-soluble solder pastes offer excellent wetting and solderability properties, facilitating the formation of strong and reliable solder joints. They are widely used in surface mount technology (SMT) assembly processes, reflow soldering, and other electronic manufacturing applications, contributing to the production of high-quality electronic products.

The major global manufacturers of Water Soluble Solder Pastes include MacDermid Alpha (Kester), Senju, Tamura, Heraeus, AIM, Genma, Henkel, Indium, Shengmao, Inventec, Qualitek, FCT Solder, Superior Flux, Shenzhen Fitech, etc. The global players
