Research Summary

Water test strips are small, disposable strips containing reactive chemicals that change color in the presence of specific water parameters or contaminants. These strips are commonly used for quick and easy water quality testing in various settings, including homes, laboratories, and industrial facilities. Water test strips typically measure parameters such as pH, chlorine, hardness, alkalinity, nitrate, nitrite, and other parameters relevant to water quality assessment. To use water test strips, a strip is dipped into a water sample for a few seconds, and then the colors that develop on the strip are compared to a color chart provided by the manufacturer to determine the concentration of the target parameter. Water test strips offer a convenient and cost-effective method for rapid water testing, providing valuable information about water quality and potential contamination.

The major global manufacturers of Water Test Strip include LaMotte, HACH, Taylor Technologies, Cole-Parmer, Palintest, Macherey-Nagel, Merck, DTK Water, RPC-Rabrenco, TSCHECK, etc. The global players competition landscape in this report is
