Research Summary

Water-washed kaolin is a type of kaolin clay that has undergone a refining process involving washing with water to remove impurities and other undesirable materials. Kaolin, also known as china clay, is a naturally occurring mineral composed primarily of kaolinite, a hydrated aluminum silicate. Water-washing kaolin involves mixing the raw kaolin ore with water and then separating the clay particles from other minerals, sand, organic matter, and soluble salts through sedimentation, filtration, and centrifugation processes. This purification method helps to improve the purity and brightness of the kaolin clay, making it suitable for various industrial applications, including ceramics, paper coating, paint, rubber, plastics, and cosmetics. Water-washed kaolin is valued for its fine particle size, high whiteness, low abrasiveness, and excellent rheological properties, which make it a versatile and high-performance ingredient in many products.

The major global manufacturers of Water-washed Kaolin include China Kaolin, Guangxi Yanhe Mining, Maoming Yinhua Kaolin, Maoqun Kaolin, Imerys S.A., Vansun Mining, Zhangzhou Xingguan Kaolin, Long Yan Kaolin Clay, BASF, Burgess Pigment Company, China Mineral Processing, Sibelco, etc. The global players competition landscape in this
