Research Summary

Waterproofing admixtures are specialized additives used in the production of concrete or mortar mixes to enhance their resistance to water penetration and improve overall durability in wet environments. These admixtures are typically incorporated directly into the concrete mix during batching or mixing. By altering the properties of the concrete matrix, waterproofing admixtures create a hydrophobic barrier that reduces permeability, effectively preventing water from seeping through the material. They may work by forming a protective layer on the surface of concrete pores, reducing pore size, or inducing crystalline growth within the concrete structure to block water pathways. Waterproofing admixtures are commonly used in construction projects where moisture intrusion is a concern, such as basements, foundations, tunnels, and water-retaining structures, to mitigate water-related damage and prolong the lifespan of the concrete.

The major global manufacturers of Waterproofing Admixtures include Kryton (CA), Xypex Chemical (CA), Fosroc (UK), GCP Applied Technologies (US), Hycrete (US), Sika (CH), BASF (DE), Penetron (US), Schomburg (DE), Markham (NZ), IPA Systems
