Research Summary

Waterstop refers to a specialized construction material used to prevent the passage of water through joints or expansion joints in concrete structures. These joints are vulnerable points where water can potentially infiltrate, leading to leaks, water damage, and structural deterioration over time. Waterstops are typically made from materials such as PVC, rubber, or bentonite, and they are designed to be flexible, durable, and resistant to water pressure. They are installed within the concrete joint or embedded within the concrete itself during construction to create a continuous barrier that blocks the flow of water. Waterstops come in various shapes and sizes to accommodate different joint configurations and project requirements, including straight lengths, intersections, and corner pieces. By effectively sealing joints and expansion joints, waterstops help to maintain the integrity and waterproofing of concrete structures, ensuring their long-term durability and performance.

The major global manufacturers of Waterstop include Sika, Trelleborg, GCP Applied Technologies Inc., Jp Specialties, Henry Company, Parchem Construction Supplies, YuMu ShiYe, Minerals Technologies Inc, Bitumat Company, Hengshui jiantong,
