### Research Summary

Weather radar is a specialized type of radar used to detect and track precipitation, as well as other atmospheric phenomena such as clouds, wind, and severe weather events. It works by emitting pulses of microwave radiation and then receiving the signals reflected back by objects in the atmosphere. The radar measures the intensity and distribution of the returned signals to generate images and maps of precipitation patterns in real-time. Weather radar systems can detect various types of precipitation, including rain, snow, hail, and sleet, as well as identify the presence of severe weather phenomena such as thunderstorms, tornadoes, and hurricanes. These systems provide valuable information for weather forecasting, monitoring severe weather events, and issuing timely warnings to the public. Weather radar is an essential tool used by meteorologists and weather forecasters to understand and predict weather patterns, helping to mitigate the impacts of extreme weather on communities and infrastructure.

The major global suppliers of Weather Radar include Honeywell, Anhui Sun Create Electronics, Selex ES GmbH (Leonardo), Enterprise Electronics Corporation (EEC),

Vaisala, Beijing Metstar Radar Co., Ltd., China Electronics Corporation, Glarun Technology, EWR Weather Radar, Toshiba, GAMIC, etc. The global players competition landscape in this report is divided into three tiers.
