Research Summary

A wedge wire screen, also known as a wedge wire filter or wedge wire sieve, is a type of filtration device used to separate solids from liquids or to retain particles of a specific size. It consists of a surface with V-shaped wires welded onto support rods, creating narrow slots or gaps between the wires. These slots allow liquid to pass through while retaining solids or particles larger than the slot width. Wedge wire screens are commonly used in various industrial applications, including water treatment, wastewater treatment, food and beverage processing, chemical processing, pulp and paper production, and mining. They are known for their durability, reliability, and efficiency in removing solid contaminants from liquids while minimizing pressure drop and maintaining high flow rates. Wedge wire screens can be customized to meet specific filtration requirements, including different slot sizes, wire profiles, and materials of construction, making them versatile and adaptable to various operating conditions.

The major global manufacturers of Wedge Wire Screen include Aqseptence Group, Costacurta S.p.A., Gap Technology, Progress Eco, Wedge Tech, HEIN, LEHMANN,
