### Research Summary

The weld overlay process for clad pipes involves applying a layer of corrosion-resistant material, typically a metal alloy, over a pipe's surface using welding techniques. This process is commonly used in industries like oil and gas, petrochemicals, and power generation to protect pipes from harsh environmental conditions, such as high temperatures, pressure, and exposure to corrosive substances. The overlay material is welded onto the pipe's surface, creating a durable, wear-resistant layer that extends the pipe's lifespan and improves its performance. Weld overlay clad pipes are especially useful in applications where the base material alone would not provide sufficient protection against corrosion, erosion, or chemical damage.

The major global manufacturers of Weld Overlay Process Clad Pipes include SSAB, BUTTING Group, Cladtek International, The Japan Steel, Eisenbau Kramer, Allied International, Proclad Group, Pourin Special Welding Technology, Xian Sunward Aeromat, European Heathyards, Zhejiang Dewei Stainless Steel Piping, Jiangxi Hengda Hi-Tech Co Ltd, CONEL, Uhlig Wel-Cor GmbH, Canadoil Group, WH-STEEL, etc. The
