### Research Summary

A welded wire mesh panel is a prefabricated grid-like structure made from welded steel wires arranged in a pattern of squares or rectangles. These panels are commonly used in construction, industrial, agricultural, and residential applications for various purposes, including fencing, security, partitioning, reinforcement, and landscaping. Welded wire mesh panels are manufactured by welding intersecting wires together at their points of contact to create a rigid and durable mesh structure. The welded joints provide strength and stability, making the panels suitable for supporting heavy loads and withstanding external forces. Welded wire mesh panels come in a variety of sizes, wire diameters, and mesh openings to accommodate different requirements and applications. They are often galvanized or coated with a protective layer to enhance corrosion resistance and durability, particularly in outdoor or harsh environments. Overall, welded wire mesh panels offer a versatile and cost-effective solution for a wide range of construction and industrial applications requiring strength, durability, and security.
