### Research Summary

A welding torch is a handheld device used in welding to create and guide the welding arc. It typically consists of a handle, a trigger or button to control the arc, a nozzle for directing shielding gas, and a contact tip through which the welding wire is fed. Wear parts are components of the welding torch that are subject to wear and need periodic replacement to maintain optimal performance. These include contact tips, which conduct electricity to create the arc and need regular replacement due to wear; gas diffusers, which distribute shielding gas and can become clogged or damaged; nozzles, which direct the flow of shielding gas and can degrade from heat and spatter accumulation; insulators, which protect electrical components and may crack or degrade over time; and liners, which guide welding wire and can wear or become clogged. Regular inspection and replacement of wear parts are essential for maintaining the performance, safety, and quality of welds.

The major global suppliers of Welding Torch and Wear Parts include Ador Welding Ltd., Colfax Corporation, ABICOR BINZEL, Harris Products Group, American Torch Tip,
